SUPPORTED BY

SecurePass™ is the future of visitor and contractor management technology which protects people and businesses along with saving lives.

Health and Safety Due Diligence

Legislative Compliance and Governance

Visitor and Contractor Management

Security, Risk and Multi-site Management

Lone and Remote Worker Management

Emergency Management

Health and Safety Due Diligence

Visitors and contractors are made aware of the health and safety and fire compliance requirements for your business.

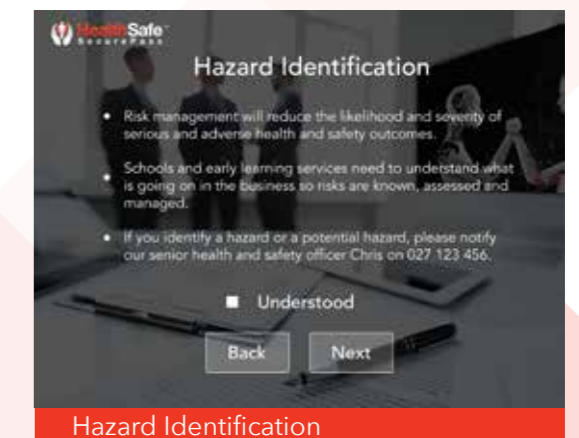

Each person is required to read and accept your Company Induction, Evacuation Plan, Hazard Identification process and to view the Hazard Register before entering the premises. Customised company messaging can also be simply created by Company Admin.

Evacuation Plan

Hazard Identification

Hazard Register

Custom Message

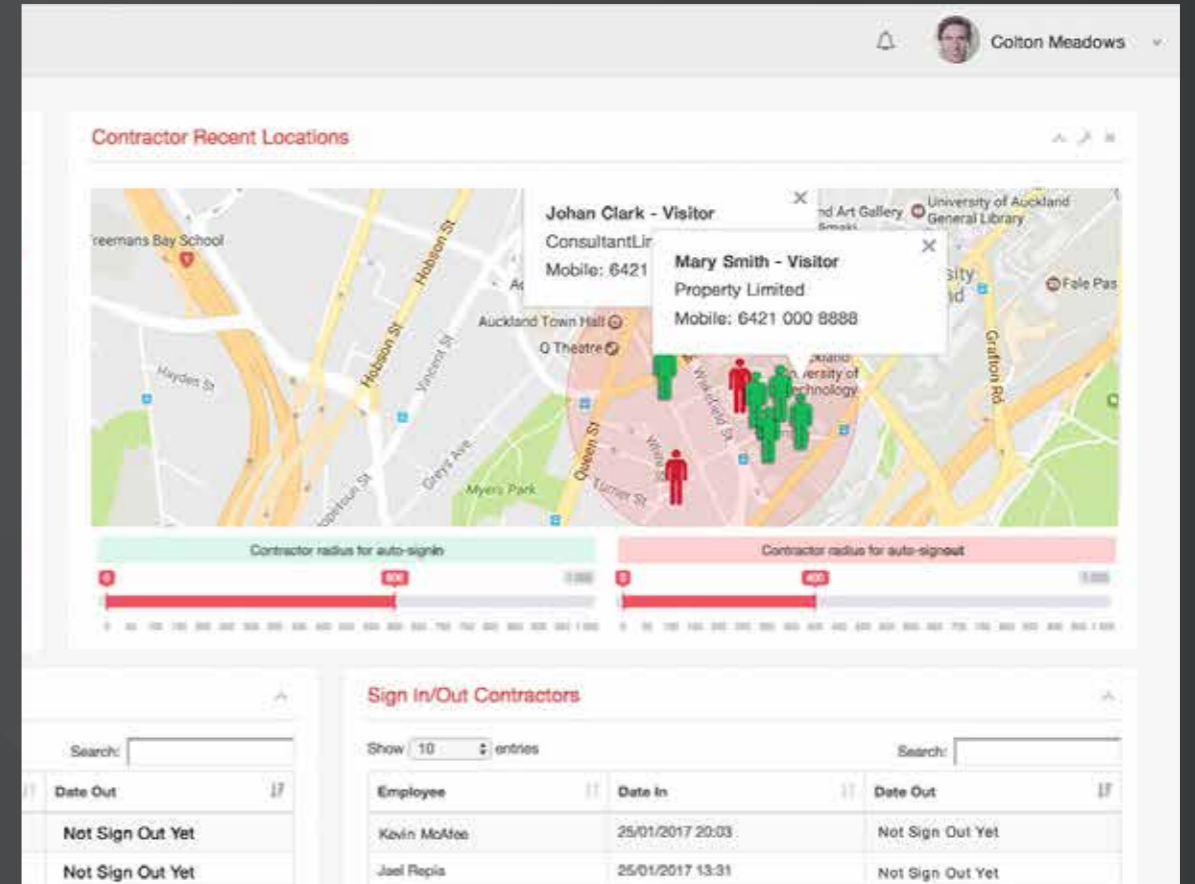

Legislative Compliance & Governance

SecurePass™ is fully compliant with New Zealand and Australian Health and Safety at Work legislation so businesses can have peace of mind when visitors and contractors arrive at their premises.

Your governance is protected through the communicating and capturing of all required information along with ensuring accountability and oversight of operations and the managing of risk.

SecurePass™ supports custom integration capability with the best risk management and time and attendance systems including HealthSafe's innovative Risk Management System.

Visitor Management

Upon accepting and acknowledging each stage of the visitor sign in registration process, email and SMS notifications are automatically sent to the person being visited.

Visitors are provided with a printed adhesive identification sticker tag complete with their photo and a QR code for a seamless sign out. SecurePass™ can be utilised to perform visitor GPS tracking throughout a property and to create restricted and unauthorised zones.

GPS tracking throughout a property

Create restricted and unauthorised zones

Contractor Management

SecurePass™ provides unrivalled contractor management functionality and is mobile compatible with smartphone and tablet devices.

GEO FENCING SIGN IN FOR CONTRACTORS BY SMARTPHONE AND AUTOMATED SIGN OUT

- ✓ Prequal & insurance validation prior to approving access
- ✓ Induction, evacuation & site specific hazard register communicated
- ✓ Personal message option
- ✓ Automated sign out

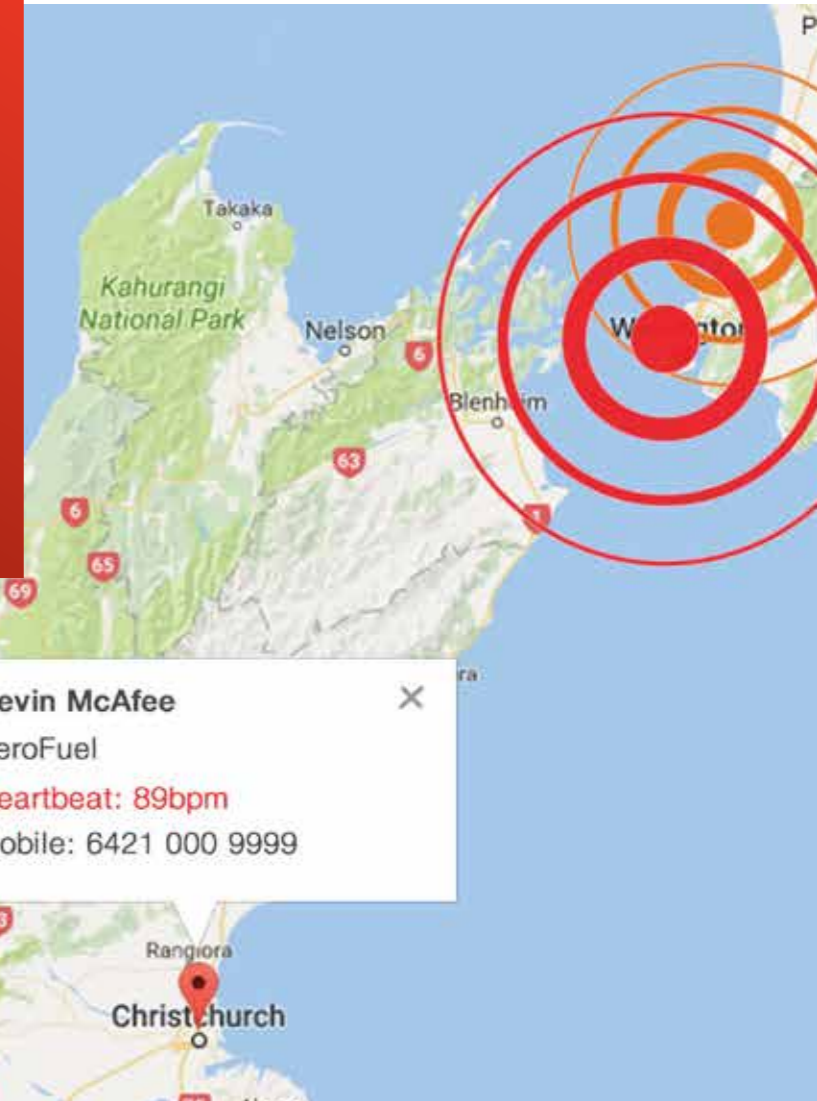

Contractor Geo Fencing

SecurePass™ allows your approved contractors to sign in and sign out of all your properties instantly. Utilising Geo fencing technology, contractors receive a notification prompting them to sign in when they enter a set area around the

respective property which removes the need to manually sign in at a designated area. Upon leaving the property, the contractor is automatically signed out by Geo fencing.

Contractor Prequal and Validation

SecurePass™ protects businesses by ensuring that your approved contractors' prequal (licences and certificates), insurance, induction and contract are validated during the sign in process. This process includes automated SecurePass™ messaging to the contractor prior to any upcoming expiry dates.

Automated notification prior to expiry dates

Track position on property for up to 1km

Contractor Tracking

The GPS feature in SecurePass™ operates with leading Google Maps technology. SecurePass™ will track a contractor's position whilst on your property for up to 1km. This is especially important in times of emergency or distress situations.

AUTOMATIC SIGN OUT WITH GEO FENCING

Contractor Time and Attendance

Automated sign in and sign out of approved contractors supports contractor time and attendance. SecurePass™ allows for the cross-checking and verification of contractor hours charged at any time with advanced filtering and search capabilities.

Security and Risk Management

SecurePass™ can support your business with the protecting of your restricted or unauthorised zones within your property. These zones can be located on different floors or areas within a building or externally within a property.

With the use of smart receiver devices strategically located within your property, automatic alert notifications are instantly triggered to key personnel via email, SMS and on the SecurePass™ dashboard when an onsite visitor, staff or contractor finds themselves within a restricted or unauthorised zone.

SecurePass™ also supports staff time and attendance by specifically locating receivers at entrance and exit points and by allocating unique staff access cards. When staff enter or leave the property or building, the SecurePass™ system automatically picks them up. No swiping or sign in is required by your staff.

Alternatively, SecurePass™ can support with staff sign in and sign out on the iPad that is also used for visitors. Staff signed in can be seen on the SecurePass™ dashboard from any smartphone device which supports general role calling or in an evacuation.

Access Control Interface

Validates contractors upon entry

Interfaces with leading access control systems

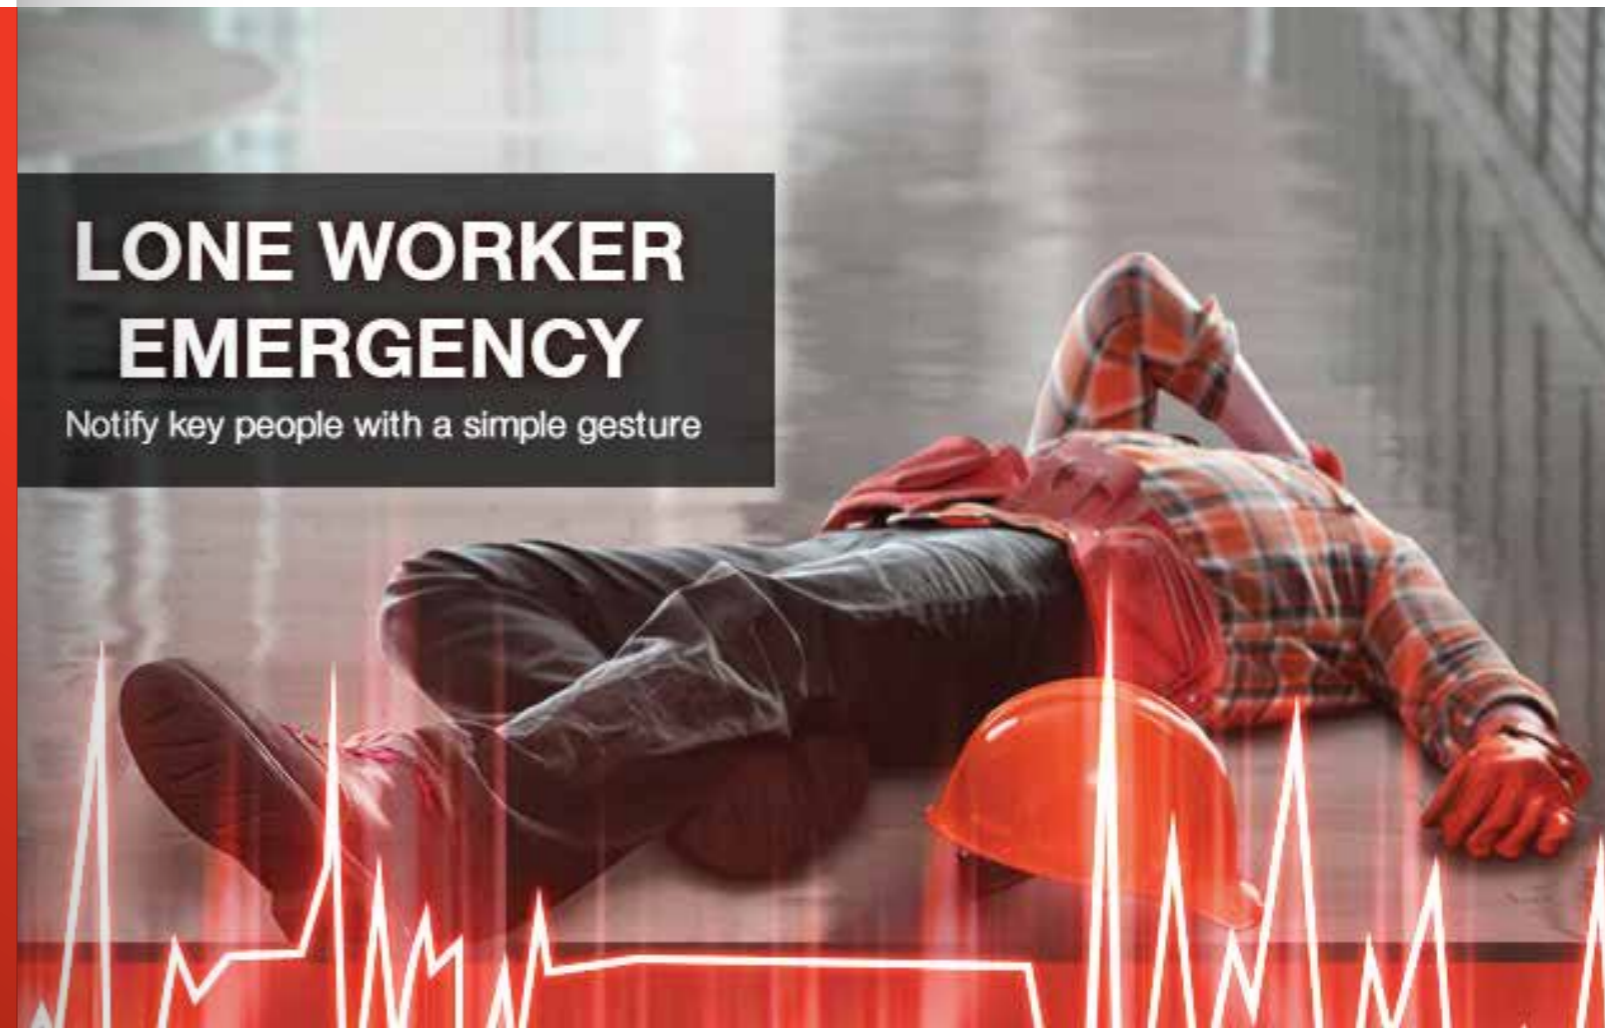

The SecurePass™ world leading technology and innovation provides a sign in solution system that validates contractors upon entry and removes the need to issue and use access cards.

Using smartphone devices, SecurePass™ can interface with leading access control systems that will significantly improve operational contractor management processes.

LONE WORKER EMERGENCY

Notify key people with a simple gesture

Lone and Remote Worker Management

SecurePass™ supports lone and remote worker management which is ideal for staff who travel and who may find themselves in situations with a high degree of risk that may require urgent assistance or support.

These workers can be GPS tracked via their smartphones with each worker also having multiple emergency alert notification features that instantly communicate back to your business.

DISASTER EMERGENCY ALERT NOTIFICATION

- ✓ Know where your people are when its needed most
- ✓ Innovative solution to show their life status
- ✓ See everything you need from your smartphone

Emergency Management

SecurePass™ is designed with multiple emergency management features which include an emergency 'shake' notification, beeper alert and a heart rate BPM (Beats per Minute) reader which instantly alerts your Company Admin via SMS, email and on the SecurePass™ dashboard of the emergency. Important information including the person's location and contact details are instantly communicated upon activation of the emergency signal being sent.

Shake action

Emergency Shake Notification

The SecurePass™ mobile application provides an emergency shake notification feature. Contractors, visitors and staff can send distress signals to designated Company Admin within seconds by simply shaking their smartphone device. This action prompts a message asking to confirm an emergency situation.

 Send distress signals within seconds

 Instant communication to Company Admin

Heart Rate Monitor

 Select heart rate icon and gently place your finger on the camera to start the heart rate monitoring.

The SecurePass™ app can be used to monitor signs of life through an innovative BPM reader where heart rate monitoring could save lives and prioritise those in need. Running the heart rate monitor registers the user's current heart rate with the reading being instantly communicated to Company Admin.

SecurePass™ provides the capability for Managers to simultaneously view multiple properties on a local, regional or national level.

This supporting feature serves as a crucial platform in the case of a nationwide emergency or disaster situation as key information is immediately available regarding onsite visitors, staff and contractors on your properties.

Multi-site Management

Capability to view multiple properties

Critical information in case of emergency situations

9 reasons

why SecurePass™ is the only visitor and contractor management system for your business
