HealthSafe™ SecurePass

OVERVIEW

Introducing SecurePass by Healthsafe out of New Zealand. SecurePass is a software package that can be supplied as a stand alone solution or fully integrated into Inner Range's Integriti Security & Access Control System which provides a comprehensive Visitor & Site Management Solution (VSMS). Fully scalable from an entry level solution to manage all staff, visitors and contractors onsite to full site management of contractors and the associated governance / compliance required for them to be carrying out works on a multi-site environment including the health and safety legislation requirements associated with COVID-19 by providing a contactless sign in / out process.

HealthSafe was born out of a requirement that was created around the Christchurch earthquakes in 2011. Kevin McAfee was the National Facilities Manager for Farmers, a large retail department store chain, and was tasked with identifying where all staff were and are they safe and healthy. The key challenges faced during this natural disaster were no visibility of staff, visitors and contractors in any of the affected department stores and there was no ability to communicate directly with them. There was no clear process to provide support to the business's most important asset – it's people. Resolving these issues has created the nucleus of the product that is known as SecurePass today which provides the tools to create complete visibility of all people onsite in the event of an emergency.

SecurePass Pro

Is the entry level SecurePass solution that provides a mobile ready, VSMS incorporating

FEATURES

- Staff & visitor manual or automatic sign in
