**BOSCH**  
Invented for life

- ▶ HD 1080p30/i60 or 720p60 decoding in single view
- ▶ Quad-view option for SD video up to 960H
- ▶ HDMI or composite video output
- ▶ Bi-directional audio and keyboard support
- ▶ Alarm inputs and relay output

VIDEOJET decoder 3000 displays H.264 encoded video at up to 60 images per second from PAL, NTSC, or HD sources over IP networks.

Establish the video connections automatically from the camera, encoder, decoder, or Bosch's comprehensive video management system. VIDEOJET decoder 3000 is capable of decoding a single HD video stream, or up to four SD video streams at the same time in quad-mode. Control the viewing mode remotely via a management system. It can drive an HD monitor via HDMI directly, thus is ideally suited for applications like flat-screen monitor walls. Alternatively, it can connect to an analogue monitor using its composite video BNC output.

VIDEOJET decoder 3000 provides one-channel bidirectional audio communication in parallel to video. Ultra-compact in size, VIDEOJET decoder 3000 is perfect for any application that depends on space-saving solutions.

## Functions

### Access security

VIDEOJET decoder 3000 offers various security levels for accessing the network, the unit, and the data channels. As well as password protection with two levels, it supports 802.1x authentication using a RADIUS server for identification.

Also the communication channels—video, audio, or serial I/O—are then AES encrypted.

### High performance

Transmit IP video to a high-performance VIDEOJET decoder 3000 and present it with ultimate clarity on an analog CCTV monitor or on a large, flat-screen display.

VIDEOJET decoder 3000 can handle up to four SD H.264 video streams with full resolution and frame rate and display them in quad-view. When in single-view, it can display an HD video stream up to 1080p30 or 720p60.

### Flexibility

With its connection page in the web browser, the optional IP Matrix license, the support of IntuiKey keyboard and integration into Video Clients and Video Management Systems, VIDEOJET decoder 3000 enables solutions in varieties from the smallest stand-alone up to large or distributed but centrally controlled applications.

### Keyboard support

VIDEOJET decoder 3000 allows direct connection of an IntuiKey keyboard to its serial interface. Controlled by and communicating to a video management system this allows to set up PC-less operator desks, ideal for remote locations like doorman's offices.

**IP Matrix system**

IP Matrix can be used to control IP-based monitoring systems of up to 32 cameras and up to ten monitors via an IntuiKey keyboard without the use of a computer. In normal operation, the system works only via the network connections between IP cameras, encoders and decoders, controlled via the IntuiKey. As part of a larger CCTV system, IP Matrix can be used as a satellite system. The higher-ranking system can access IP Matrix for control purposes. Otherwise, IP Matrix works independently and is completely self-sufficient.

**Easy upgrade**

Remotely upgrade the decoder whenever new firmware or software becomes available. This ensures up-to-date products, thus protecting investment with little effort.
