

# ANR Solution

## What is ANR Solution?

ANR Solution is an Automated Network Recovery System, commonly known as "Edge Recording" or "Fail-Over". ANR Solution works by using the on-board SD card of the camera to record any images while the connection is lost between the camera and the NVR.

Upon restoral of the link between your camera and NVR the Camera will push all the images/recordings from the SD card to the NVR storage system filling in the gaps of the outage.

Upon Network Restoral
