Connecting your Business

Germany's premium brand
for IP telephony

IP telephony pioneer

The devices are as diverse as the requirements – Snom offers the perfect solution for every environment.

With over 25 years of experience, Snom is the first and leading brand for IP phones in the professional and corporate sector. Founded in 1997 in Germany, we have grown into a multinational company with 6 offices across Europe and Africa. Since 2016, Snom has been part of the VTech Group, the world's largest manufacturer of cordless phones.

We are cosmopolitan in outlook – the Berlin team alone is made up of more than 22 nationalities enabling us to support our business partners in their respective mother tongues.

Our phones are compatible with all main PBX systems.

We offer a variety of designs and equipment in our product range.

Snom in a few words

Snom offers superior quality, developing its products in Germany.

Our mobile DECT solutions are ideal for those who are frequently moving in or between different buildings and still need to be contactable – this applies to smaller settings (medical practices, laboratories) as well as larger setups (hospitals, office buildings and warehouses).

Our solutions for conference calls make it quick and easy to hold meetings with participants in different locations.

High quality solutions in every detail

Quality from Germany

Our products are holistically designed in Germany to specifically meet the needs of our partners and customers, true to the words "Engineered in Germany".

Premium audio technology

With over 25 years of experience in the field of acoustics, we have been able to develop outstanding audio quality.

Groundbreaking software

Snom firmware is continuously developed and offers the business user an extensive range of useful features for everyday and specific use.

Innovative industrial design

User orientation in the various scenarios and situations of use is a central component in the research and development of Snom products.

Beyond VoIP

The Snom Beacon solution enables Snom to combine DECT radio technology with Bluetooth LE technology, in addition to professional live location and asset tracking as well as the use of alarm systems.

Advanced semiconductor technology

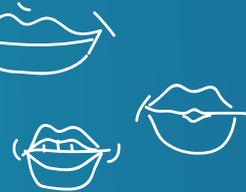

Snom devices offer customers innovative features, making them the most advanced products on the market.

Data protection in the VoIP age

Snom hosts the SRAPS service in the greater Frankfurt a.M. area, Germany, in accordance with the strict German data protection law and the European General Data Protection Regulation (GDPR).

Brilliant displays

Snom attaches great importance to the quality of its telephone displays. This is why we only use high-quality TFT and FSTN displays for our devices.

Connecting your Business

Desk phones

Make phone calls on site

Elegantly designed desk phones in four product series with crystal-clear audio quality and versatile features as well as many configuration options for every desk, workstation or reception.

Audio conference devices

In the conference room

Outstanding sound quality during hands-free calling due to 25 years of experience and development including established software – also with the wireless expansion microphones from Snom.

Cordless phones

Make phone calls on the move

Devices that keep you within reach even when you have to move away from your workplace, whether it's a hotel, hospital or logistics company.

Headsets

Hands-free when making calls

A range of cordless and corded headsets to keep your hands free when at work or not to create a disturbance when taking part in telephone or video conferences.

Public address systems

Announcements and background music

The ideal device for public address systems with music, general announcements or specific calls for any work environment, such as hospitals, medical practices, government agencies, supermarkets, retailers and airports. Also perfect for switching any device, whether it's a garage door, door opener, signal horn or beacon.

Location gateway

Localisation, tracking and alarm solutions

The location gateway solution, consisting of the beacon gateway and the beacon tags, combined with the bases of the Snom M series (also with Bluetooth-enabled handsets if preferred), is used to determine the position of individual persons or objects or to prevent secured devices from being stolen.

Snom everywhere

The devices are as diverse as the requirements.

Each working environment makes specific demands on telephone calls and thus on the devices used – Snom offers the ideal solution for every environment.

-  Open-plan and business offices
-  Logistics and warehouse management
-  Retail and sales areas
-  Medical practices and reception rooms
-  Educational and public institutions
-  Home office and mobile working
-  Hospital and care facilities
-  Hotel and hospitality industry

Become a Snom Partner

For over 25 years, the story of Snom in the world of IP telephony has been one of success. Above all, we owe this to our specialist dealers, who recommend us worldwide and install our devices.

We have launched the Snom Partner Program for them. This rewards their commitment and builds the strong permanent relationship.

For the perfect introduction, partners directly receive a Snom product as a test device. The daily work of our partners is rewarded by paying out a fixed amount as a "discount" per device for most of our products from Silver status.
